Six AI Functions

One Indexed Corpus

Federated Architecture

Air-Gapped Deployable

# DocIQ.

## Your unstructured documents — **finally a team, not a Frankenstack.**

Eight to thirteen disconnected tools is what most enterprises run today to get value out of their unstructured content. **DocIQ replaces that stack with one platform — six AI agents on one indexed corpus, one auth model, one audit log.** Connect to documents wherever they live — S3, SharePoint, Box, Drive, Confluence — without migration. Production-proven at a \$300B pension fund.

**DocIQ Suite**  
One indexed corpus · six AI functions

**INDEXED**

 <b>Chat</b> Cited Q&A on every doc.	 <b>Create</b> Any doc from your templates.	 <b>Extract</b> Structured fields, scored.
 <b>Library</b> Governed, versioned home.	 <b>Review</b> Contracts vs. playbook.	 <b>Comply</b> Continuous regulation tracking.

SHARED SEMANTIC LAYER · MULTI-TENANT

6 FUNCTIONS · 1 CORPUS

– THE STATE OF ENTERPRISE DOCUMENTS

# Your document AI is a Frankenstack.

Box AI runs on Box. Microsoft Copilot runs on SharePoint. Adobe AI runs on PDFs in Acrobat. Every vendor's "AI" deepens their own moat — and leaves the actual work spread across 8–13 disconnected tools that don't share context, don't share permissions, and don't share an audit log.

**8–13**

Disconnected document tools the average enterprise runs to do **one job**: get value from unstructured content.

**~40%**

Of enterprise data budget goes to **integration tax** — moving documents between tools that don't talk to each other.

**80%**

Of business users are **locked out** of the documents they need — buried in tools only specialists can operate.

△ THE FRANKENSTACK – WHAT MOST ENTERPRISES RUN TODAY

▼ ▼ ▼ The same document gets uploaded 5+ times ▼ ▼ ▼

**No shared context.** A document indexed by the chatbot is invisible to the doc generator. Every tool re-uploads.

**No shared audit.** Six tools, six audit logs. Forensic reconstruction takes weeks.

**No shared permissions.** Six places to revoke a leaver's access. Inevitable misses.

– WHAT IT ACTUALLY COSTS

TOOL CATEGORY IN THE TYPICAL STACK	ANNUAL COST (MID-MARKET)
Document chatbot · Q&A platform	\$80K – \$250K
Document generation · AI authoring	\$60K – \$180K
OCR · intelligent document processing	\$120K – \$400K
Contract review AI · CLM add-on	\$100K – \$350K
GRC platform · compliance tracking	\$150K – \$500K
DMS / knowledge management · integration glue	\$200K – \$600K

— ONE PLATFORM, SIX AI AGENTS

# One ingestion. Six destinations.

DocIQ isn't six products bolted together. It's **one ingestion pipeline, one semantic index, one auth model, one audit log** — exposed through six purpose-built UIs. A document indexed for Chat is instantly available as a source for Create, a target for Extract, a candidate for Review, and an artifact for Comply.

## ⊕ THE FEDERATION PROMISE

Stop bringing documents to the AI. **Bring AI to the documents.** Connect to S3, SharePoint, Box, Drive, Confluence — without migration. Permissions inherited from source. Bytes never leave your perimeter.

### **DocIQ Chat** CITED Q&A

Hybrid retrieval (BM25 + vector) over your unstructured corpus with **page-level citations**. Refuses to answer when retrieval is below confidence.

### **DocIQ Create** DOCUMENT GENERATION

Generate **any document type** from your templates — SOPs, BPAs, RACI, briefs, audit responses, board papers — branded, cited, and routed through approval.

### **DocIQ Extract** STRUCTURED FIELD PULLS

Pull structured fields with **per-field confidence scoring**. Reviewer corrections become ground truth for the next batch.

### **DocIQ Library** GOVERNED KNOWLEDGE STORE

The index, not the storage. Tracks every document, template, schema — with version chains, supersession, and **permissions inherited from source**.

### **DocIQ Review** CONTRACT REVIEW

Contract review at the speed of decision. Coverage check, risk scan, and **redline-ready Word export in ~90 seconds**. Works with or without a formal playbook.

### **DocIQ Comply** CONTINUOUS COMPLIANCE

A living map between regulations (HIPAA, SOX, GDPR, SOC 2, FedRAMP, ERISA...) and your policies. **Audit-evidence packages export in seconds**, not weeks.

/ 01

#### Federated, not vendor-locked

Connect to **every store at once** — not just one vendor's silo. No migration project.

/ 02

#### Citation-first, always

Every claim cites a page. Every field cites a paragraph. **Provenance is the default**, not a bolt-on.

/ 03

#### Inside your tenant

VPC or air-gapped. Your encryption keys. **Bytes never leave your perimeter**.

– PRODUCTION PROOF

# Already running on a \$300B reference deployment.

DocIQ runs in production today at a major government pension fund managing approximately \$300B in assets — handling benefit eligibility, compliance reporting, document cataloguing, and governance in a fully private, air-gapped deployment. Information retrieval that previously took days now takes seconds.

\* REFERENCE DEPLOYMENT

## A \$300B pension fund. Air-gapped. Production today.

Benefit eligibility decisions, compliance reporting, document cataloguing, and governance — all running on DocIQ in a fully private deployment. **Bytes never left the perimeter. Information retrieval went from days to seconds.** Same architecture available to commercial enterprises and other government agencies.

**~90s**

Per contract review

**days → s**

Information retrieval

**weeks → s**

Audit evidence packs

**100%**

Findings cited to source

– THREE WAYS TO DEPLOY

 **SaaS Multi-Tenant**

Fastest path to value. Per-tenant isolation, shared infrastructure. Best for commercial deployments without strict residency requirements.

 **Private VPC**

Single-tenant deployment in your AWS, Azure, or GCP account. Your encryption keys, your network, your audit logs. Most common enterprise pattern.

 **Air-Gapped**

Fully on-premises with private LLM inference. No external network calls. The architecture used by the \$300B reference deployment.

– GET STARTED

## Six functions. One platform. Thirty minutes.

Live demo on documents you actually care about. Bring a contract, a policy, a stack of PDFs — see DocIQ run on them. **No upload required.** Connect to your store and we'll index in real time.
